

# HEATING OIL PLUS™ MINUS THE NEGATIVE.

## WARMTH MINUS WORRY.

When you incorporate Heating Oil Plus™ into your customer's heating oil regimen, you're providing the reassurance that it's working 24/7 to keep their system running at peak performance. For you, this means higher customer loyalty, less service calls and lower operational cost resulting in higher profit margin.

## JUST ADD BIODIESEL.

Our technical team recognized the importance of adding value to both the present and future of heating oil, which is why Heating Oil Plus™ is formulated to enhance traditional heating oil as well as Bioheat® fuel.

## WARMTH MINUS WEAR.

While others rely on a first generation approach to resolve fuel quality deficiencies, Global continues to evolve by matching the right technology for the fuels you purchase today. We help reduce sediment build up that may already be in the tank, filters, pipes and nozzles. This is our best-in-class approach to protecting home heating oil from the challenges that come with sulfur removal. The result is a healthier fuel system that operates more effectively with less worry for you and your customers.

## THE SUM OF OUR PARTS.

Global's longstanding legacy of providing superior technology, availability, and service continues to propel our business and the business of our customers. Our investment in research and development, our expansive supply network, and our extensive experience in energy markets ensures you the highest performing and most consistent product, along with comprehensive technical service and marketing support to help you boost sales, build loyalty, and deliver on your own promise of excellence and reliability.
